

ProComputing Corporation

Bringing the 21st Century to Texas Classrooms.

At ProComputing, we specialize in bringing the 21st Century learning environment to classrooms all over Texas.

For more than 20 years, we've helped schools and educators prepare and embrace the kinds of change that make a difference in their students' lives. Sometimes we are the teachers – sharing what we know, while other times we are the students – learning what you need. Regardless of the role, we are focused on making you and your students more successful.

Here's what our dedicated team of professionals can offer you:

The right tools. We work with schools to find the best solutions for their teaching environments.

Applied research. We will demonstrate hands-on classroom experiences, based on documented research, designed to impact every student's achievement.

Planning and implementation. Our comprehensive education plans include not just hardware, but also onsite classroom orientation, professional development, and implementation strategies for effective results.

Local support. We support Texas initiatives with local events including user groups focused on collaborative curriculum integration and effective classroom management.

Experienced installation experts. Our certified installation team applies the same level of care and focus to every implementation project, no matter the size.
